# Take the Mystery and the Hassle Out of Coverage Confirmation with Vim Eligibility

The Eligibility solution puts important patient-specific benefits information – from plan coverage dates to out-of-pocket costs – at a provider's fingertips within existing EHR workflows.

With Eligibility, provider care teams can treat the patient with confidence knowing what care options and resources are available for their patients from a single view.

Gain enhanced visibility into cost sharing, formularies, centers of excellence, and more without leaving the EHR to make the most of a patient's resources.

Save time and skip the tedious manual processes of checking portals or making calls to confirm benefits. Patient-specific plan details are at the team's fingertips when most relevant - at the point of care.

Provide a better patient experience by ensuring patient care plans are aligned with resources available to them. Patients and care teams feel confident in the next steps.
