

## Prior Authorizations in Your EMR with No Portal Required

The **Prior Authorization** application provides an end-to-end in-EHR prior auth workflow without the need to phone, fax or access a portal. Experience delivery of real-time prior auth requirements with code lookup, case submission, and status check functionality all in one place.

### Learn more about this solution:

**Enable a single point of access** to patient-specific health plan data and payer-specific prior authorization requirements delivered when it's needed - at the point of care.

**Modernize EHR workflows** with a context-aware connection that uses active clinical orders to trigger and auto-populate plan-specific prior auth checks.

**Simplify entire authorization process** with in-app code lookup, approval requirements, case submission, and status search and update.

**Unify management of prior authorization status checks** with in-app status search and update functionality.

**Reduce administrative burden** within existing EHR interface by replacing phone calls, faxes, portals, and other manual prior authorization steps.
