# Achieve Faster and More Streamlined Referral Requests and Scale Referral Steerage With No Portals
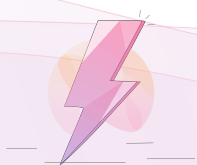

Now Available Through Vim Connect

Introducing a new integration between Vim and Availity for referral requests through the Vim Order Assist solution.

Vim's Order Assist solution gives the right context at the right time to assist providers and care teams in the selection of high-performing, in-network specialists directly through EMR workflows.

Now your clinics can leverage an automated Availity Referral Request workflow that triggers only when your relevant members are in context. No more switching between the EHR and the Availity portal to check and see if your member requires a referral request or to submit one. Vim Order Assist users can simply login to their EHR, complete a referral specialist selection using Vim Connect and enjoy a seamless transition to the in-app Availity Referral Request workflow.

Unlock powerful workflows and scale referral steerage adoption at the point of care and within existing EHR order workflows for your providers and their care teams.

Save providers and their teams time going back and forth between EHRs and Availity to check referral requirements and submit referral requests for your relevant members. Including near-instant results for requests right in Vim Connect.

Reduce administrative burden for care teams with pre-filled form fields pulled from the patient details in the EHR, and user-friendly search fields. Users enjoy less clicks and manual processes with the **in-app deep integration workflow between Availity and Vim Connect**.
